2009 April 28

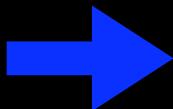

CERES Science Team Meeting

Newport News, Virginia

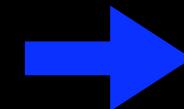

Model for Atmospheric Transport and Chemistry

Terra/Aqua MODIS

level 3 (daily 1 x 1
gridded) AOD

MATCH

SARB

NCEP/NCAR

reanalysis met fields
6-hourly 1.9 x 1.9
28 levels

MATCH supplements MODIS AOD retrievals with information required for radiative transfer

- AOD when missing MODIS retrieval (clouds, bright surface)
- aerosol 4D mass distribution by species
- SARB aerosol optical models give single scattering albedo, asymmetry parameter

MATCH Simulation

March 2000

MODIS Collection IV

January 2006

MODIS Collection V

December 2007

Terra + Aqua

November 2007

MATCH with major changes

November 2007

CAM Community Atmosphere Model 4

CAM MODIS assimilation (Arellano)

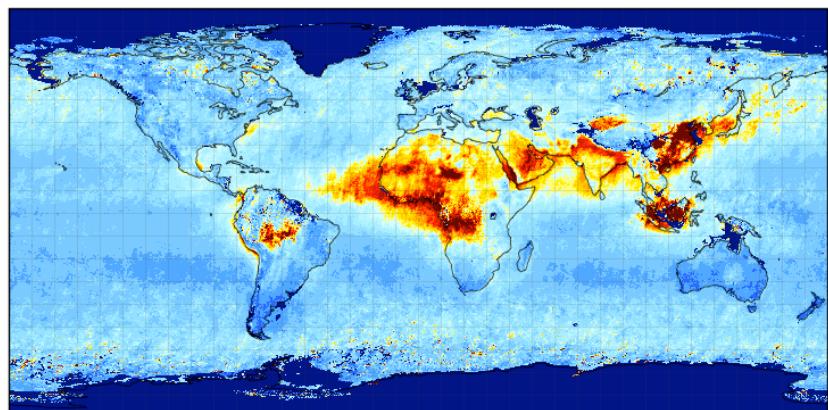

MATCH with minor changes

- changes to dust optics
- MODIS Collection V
- met fields switch from NCAR Data Support Section to NOAA CDC Climate Diagnostics Center
- model automation (CDC OPeNDAP server)
- run **MATCH with CERES system at ASDC?**

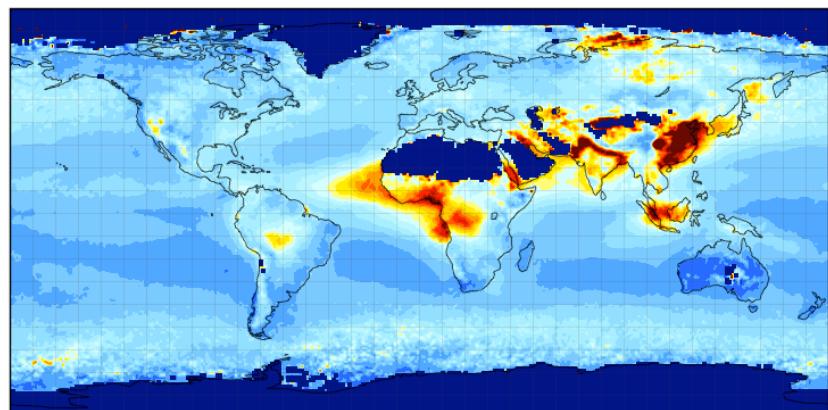

MATCH with major changes

- prognostic sea-salt (Mahowald and Rasch)
- changes to sulfate optics, water uptake
- MODIS fine mode fraction to adjust relative aerosol species
- switch from level 3 to level 2 MODIS
